Other

EXAMINER'S ACTION

-2-

Serial Number: 08/070,510

Art Unit: 3304

The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

claims 1-13 are rejected under 35 U.S.C. § 103 as being unpatentable over Nesbitt in view of Nakamura. Nesbitt discloses the claimed invention with the exception of the particular materials utilized. However, one of ordinary skill in the art would in view of Nesbitt's disclosure recognize that other known materials could have been utilized in the invention so long as the cover comprised a harder inner layer overlaid by a softer outer layer. As disclosed by Nakamura the use of high acid ionomers is known in the art. It would have been obvious to one of ordinary skill in the art to utilize the known materials recited by the applicant in the relation suggested by Nesbitt absent a showing of unexpected results, (Claims 1-4 and 6-13).

Serial Number: 08/070,510

Art Unit: 3304

Concerning claim 5, it would have been obvious to one of ordinary skill in the art to have increased the thicknesses of Nesbitt's layers to increase the durability of the ball.

Saito, Sullivan et al., Pocklington et al., and Molitor have been cited for interest because they disclose similar balls.

Any inquiry concerning this communication should be directed to Mark S. Graham at telephone number (703) 308-0858.
